Library constructed by A.M. Zorn (Wellcome/CRC Institute). DNA
Sequencing by: Washington University Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.E. Consortium/LINL at: info@lmage.llnl.gov
Possible reversed clone: similarity on wrong strand
Seq primer: -40UP from disco
High quality sequence stop: 379.
     Xenopodinae; Xenopus.
1 (bases 1 to 424)

Email: est@watson.wustl.edu
Library constructed by A.M. Zorn (Wellcome/CRC Institute). DNA
Sequencing by: Washington University Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.E. Consortium/LLNL at: info@image.llnl.gov
Possible reversed clone: similarity on wrong strand
Seq primer: -40UP from Gibco
High quality sequence stop: 309.

Library constructed by A.M. Zorn (Wellcome/CRC Institute). DNA
Sequencing by: Washington University Center
Sequencing by: Washington University Center
Clone distribution: Kenopus clones from this library are available
through the I.M.A.G.E. Consortium/LINL at: info@lmage.llnl.gov
Possible reversed clone: similarity on wrong strand
Seq primer: -40UP from Gibco
High quality sequence stop: 375.

Library constructed by A.M. Zorn (Wellcome/CRC Institute). DNA
Sequencing by: Mashington University Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.E. Consortium/Lub. at: info@image.llnl.gov
Possible reversed clone: similarity on wrong strand
Seq prime: -40UP from Gibco
High quality sequence stop: 397.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of novel vector plasmid pUNI-10. It includes: the conditional origin of replication from R6K-gamma, derived from plasmid R6K (ATCC 3720); a Not1-Kpn1 polylinker that derilitates the exchange of Lox sites; a wild-type loxP site (see also AAZ58066); a polylinker used for the insertion of genomic DNA or CDNA sequences; a bovine growth hormone polyA site; a T7 terminator; and a kanamycin removed the native Nool site. pUNI-10 is an example of novel Univertors or pUNI vectors of the invention that have a sequence-specific recombinase target site (e.g. loxP) preceding the insertion site for the gene of interest, a selectable marker gene (optional) and a conditional origin of replication that is active only in host cells expressing the requisite transacting replication factor (optional). The vectors are designed to contain a gene of interest but to lack a prometer for expression of the subcloning of nucleic acid sequences. The method is referred to subcloning of nucleic acid sequences. The method is referred to subcloning of nucleic acid sequences. The method is referred to subcloning of nucleic acid sequences. The method is referred to subcloning of nucleic acid sequences. The method is referred to subcloning of nucleic and sequences. The method is referred to subcloning of nucleic and sequences. Publication events are genetically selected and result in placement of the gene of interest under the control of novel regulatory elements. A second Ups-related method allows for the precise transfer of coding sequences alone from subcloning of entire nucleic acid libraries and the directional cloning of linear nucleic acid libraries and the directional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  991

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence shown is that of a novel transposon useful for sequencing long DNA sequences. The transposon comprises a partial sequencing long DNA sequences. The transposon comprises from phages SP6 and T7 inserted near the opposite ends of Tn5. At each terminus a segment of 19 nucleotides of either the O-end or I-end of Tn5 are present and restriction enzyme sites are positioned throughout the sequence (esp. with one at either end, less than 20 bases from each terminal segments of Segments of foreign DNA of at least 17 bases are positioned directly adjacent to each restriction site. The transposon also comprises a Tn5 transposase gene insert and a kanamycin selectable marker for the transposable DNA unit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1340 CGCTGGAGGATCATCCAGCCGGCGTCCCGGAAACGATTCCGAAGCCCAACCTTTCATAG

                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the ThSseq1 transposon used in the method of the invention. The method is for RNA transcription, and comprises the insertion of the ThSseq1 transposon into an E. coli DNA molecule to obtain hyperexpression of genes adjacent to strong promoters SP6 or T7. The transposon is useful for stimulating the transcription of genes adjacent to the heterologous SP6 or T7 promoters in E. coli, for making RNA transcripts in vitro and the hyperexpression or specific transcription of genes (adjacent to the SP6 or T7 ends) in vivo. ThSseq1 offers a less laborious method of sequencing long DNA molecules than current methods such as base-specific chemical cleavage and enzymatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1340 CGCTGGAGGATCATCCAGCCGGCGTCCCGGAAAACGATTCCGAAGCCCAACCTTTCATAG

                                                                                                                                                                                                                                                                                                             Transposon Insseq1 was constructed from the pBR322-derived plasmid pBR322:3C1:ThE. The novel transposon is contained in plasmid pBRG1408. Ican be used for sequencing bacterial genomic DNA without recombinant DNA cloning and also for sequencing DNA cloned in phages or multicopy plasmids. It may also be useful for RNA sequencing with SPG and IT RNA polymerases, for making RNA transcripts in vitro and for hyperexpression or specific transcription of adjacent genes in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB 13; Length 3177;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                        Plasmid encodes a fusion protein consisting of 1 or 2 affinity peptides bonded directly or consisting of 1 or 2 affinity peptides bonded directly or indirectly to a biologically active protein (i.e. dihydrofolate reductase). The presence of adjacent His residues in the affinity peptides allows purificn of the biologically active protein by metal-chelate chromatography on nitrilocritacetic acid resins. This sequence represents the plasmid pDMI.1. This plasmid was used in conjunction with the expression plasmids pDS56/RBSII, -1, and -2. These plasmids contain the regulatable promoter/Operator element (N250FSMISOFS) and the ribosomal binding sites (RBS) RBSII, RBSII(-1) and RBSII(-2) respectively. These RBS are derived from the RBS of the promoter pg25 of the B. coli phage TS. These plasmids may be maintained in E. coli play if the promoter/operator element is repressed by the binding of a lac repressor to the operator. The lac repressor is encoded by the laci gene. NZ50FSMISOFSOR can be repressed efficiently only when a sufficient amount of repressor molecules are present in the cells. Therefore the lacid allele, which contains a promoter mutant responsible for increased expression of the repressor contains the neowych phosphotransfearse gene from the plasmid pACYC184 which contains all the information required for the plasmid between bases 1-1120 contains the replication and stable transmission to daughter cells. The region of these plasmids between bases 1-1120 contains the replication region and the gene for beta-lactamases gene is mediated by elimination of the HinoIII and PetI cleavage sites. These plasmids between plasmids all the enzymes Sall, PetI and HinoIII, also contain cleavage sites the enzymes Sall, PetI and HinoIII,

The modified fragment was inserted into each of pDS56/RBSII, pDS56/RBSII-1, and pDS56/RBSII-2. Plasmids contg. the inserts in both possible orientations were transformed into E. colistrain MIS carrying the compatible pDMI.1. The E. colistrain MIS contg. plasmids pSD56/RBSII and pDMI.1 is described in EP-316695.

This vector includes a neomycin phosphotransferase gene as a selectable marker, an Escherichia coli origin of replication (oric from pUC129), a phage T5 promoter sequence, 2 lac operators (see also AAV33722), a Shine-Dalgarno sequence, the lactose operon repressor gene (lacily) and a multiple cloning site el linker region. Expression of operatively linked sequences located downstream from the lac operators may be induced by addition of a lac operon inducer such as IPTG. pHE4 vectors have been produced that include the coding sequence (see AAV33697) for novel human thymus receptor tyrosine kinase (TRTK, see AAW70525-26). These can be used for the

                               of the
the terminator of E. coli phage lambda, the promoter-free gene of chloramphenical acetyltransferase (CAT) and the terminator T1 of the E. coli trnB operon. These plasmids differ by one nuclectide following the ATG start color resulting in protein expressio in all three potential reading frames. (Updated on 25-MAR-2003 to correct PN field.)
